

`std::unique_ptr< TaskGenerator >`

`std::vector< int >`

process

edges

`tesseract_planning
::GraphTaskflowNode`

```
graph BT; A[tesseract_planning::GraphTaskflowNode] -.->|process| B[std::unique_ptr< TaskGenerator >]; A -.->|edges| C[std::vector< int >];
```

The diagram illustrates the relationships between the `tesseract_planning::GraphTaskflowNode` class and two standard C++ containers. The `GraphTaskflowNode` class, shown in a grey box at the bottom, has two outgoing dashed purple arrows. One arrow, labeled 'process', points to a `std::unique_ptr< TaskGenerator >` container box at the top left. The other arrow, labeled 'edges', points to a `std::vector< int >` container box at the top right.
