

tesseract_process_managers
/examples/raster_example
_program.h

```
graph BT; A["tesseract_process_managers/examples/raster_manager_example.cpp"] --> C["tesseract_process_managers/examples/raster_example_program.h"]; B["tesseract_process_managers/test/tesseract_process_managers_unit.cpp"] --> C;
```

The diagram illustrates a header file inclusion relationship. At the top is a grey-shaded box representing the header file `tesseract_process_managers/examples/raster_example_program.h`. Below it are two white boxes representing source files. A blue arrow points from the left source file, `tesseract_process_managers/examples/raster_manager_example.cpp`, to the header file. Another blue arrow points from the right source file, `tesseract_process_managers/test/tesseract_process_managers_unit.cpp`, to the same header file.
